Summary

Nenhuma entrada de índice remissivo foi encontrada.

Introduction

Among the tasks of a system, the most common is the generation of reports. Present in most systems, but often not sufficiently recognized, this task is an important stage in the construction of a system. Basically, the report generation process consists into defining the visual and mapping data to fields within a defined style.

In this context, the Hermes Project is the report generating system.

This project was aimed at replacing the report model currently employed by the Consulate General of Brazil in Hartford - Connecticut.

It will be accessible both through mobile devices (cellphones, laptops or tablets), using the IOS and Android Operating Systems, and via desktop (Windows / MAC).

Reports will be generated in PDF or XLS formats.

Functionalities

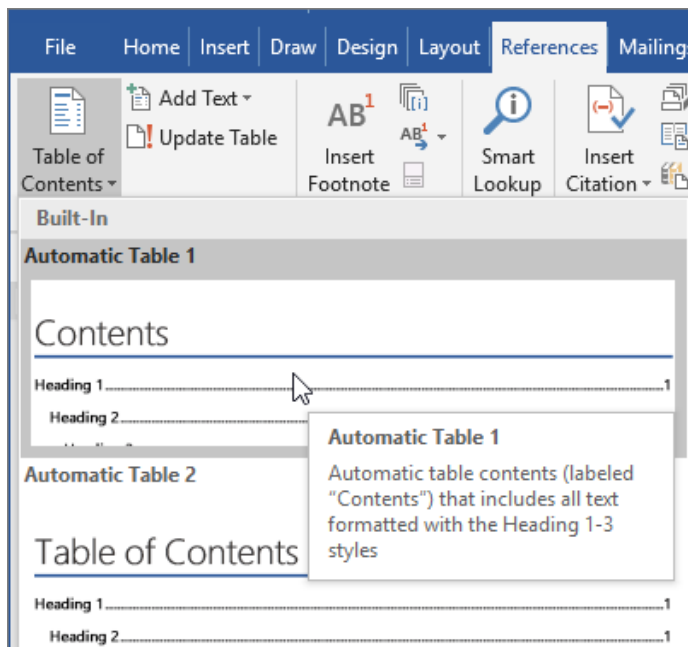

After the system set up, the user will have access to the profile configuration page for the system's user identification.

Configuration Screen Profile Here.

Explanation of each form item

To add a TOC (short for *table of contents*), just decide where you want it. Word will do the heavy lifting.

Try It: Hit Enter after the first paragraph in this doc to get a new line. Then, go to the **References** tab, select **Table of Contents**, and choose a TOC from the gallery.

Voila! Word found all the headings in this document and added a TOC.

After completing the registration of the call handler, the system will take it to the main screen. Through this, the on-call staff can browse the entire system, therefore be able to consult, edit, create and generate.

Consult

With the help of filters, the system will return the results desired by the call handler.

Insert consultation screen

Edit

If the on-call staff wishes to make any changes to the service, the form filled with information previously registered will appear with the fields unlocked for alterations.

Insert editing screen

Create

This button will give access to the call registration screen

Insert registration screen

Generate

With this button, the on-duty officer will start the process of generating the report, whether as PDF or XLS.

I emphasize that the reports generated will be read-only mode, that is, no changes can be made to the reports.

If one needs to change them, they will have to search for the service and edit the record through the system itself.

Place screen shot for report generation here.

Report Form

This page will be accessed only after creating the profile of the duty officer.

In it, the duty attendant must complete the form with the information obtained from the call received.

Insert Report Form screen for the report

After filling out the form, the duty officer will find 2 buttons:

- Save – this button saves the information typed at the Data Base.
- Generate – this button will start the report creation.
